

## **Investing in an NFT in combination with a project or business**

Whereas NFT's are typically acquired as a tradable asset in and of itself, another strategy is using an NFT as a hedge. In this case the NFT is exclusively associated with a (non-crypto, startup) business or project. The NFT is offered in a package deal with a share in the company. This could entail a proverbial "two for the price of one" in any way that is agreed. The mutual benefits are evident: the investor looks at 2 value propositions spreading the risk, and as a result the seller or entrepreneur can, in principle, attract more funding more easily.

The sellers' prime interest is their company or project itself. The strategy is to introduce the NFT as a profit base as well as a hedge especially during a startup phase. This way the investor benefits from a booming marketplace in various ways without their shares being diluted.

***Investing in the Rainbow Weaver project means an investment in fascinating next generation science with a lot of spin-off potential.*** The basic principles which especially relate to the RW Art Installation - it demonstrates how perception works in the brain at a fundamental level - are covered in the concept video itself, but there is much more. As a trans-disciplinary, so called "STEM" research project, the potential applications range from physics, to life sciences, to educational policy and curriculum. As a study in geometry, it could be seen as an extension of the work of Buckminster Fuller, applied to fields like bio-physics and neuroscience. The new paradigm closely adheres to, but reaches beyond the equations of modern physics, providing a bridge to a wealth of possibilities hidden in the fabric of nature.

The Rainbow Weaver Art Installation will be developed using state of the art design and production methods, featuring high quality materials and finish appealing to critical, high-profile buyers. The plan is to manufacture a limited, customized series aiming for placement at international, eye catching top locations. Smaller size production models or models with additional features can be licensed out.
